

AustraBlend®

Multi Mineral Root Zone Conditioner

Turning Desert Sand into Arable Soil...

Maximizing the use of AustraBlend® Multi Mineral Root Zone Conditioner

The product was developed with the objective of treating high production agricultural land, landscapes of all dimensions and the soil of sports and playing fields specifically lacking in highly nutrient activated water absorbing clays. At recommended application rates, we have achieved this objective with once only applications to maximize production rates in the shortest time frame at the maximum productive life span.

Applications of AustraBlend® Multi Mineral Root Zone Conditioner are intended to increase soil yield potential immediately as well as to increase soil fertility in the short to medium term.

Our research has demonstrated that in sandy soils this objective is achieved with a once only application of $\leq 5 - 10\%$ by volume incorporated into the soil at depths of 150 – 200 mm.

Substantially increased water absorption capacity (WHC)

Increased nutrient adsorption and recycling leading to significantly increased CEC and Buffer Capacity levels at recommended application rates.

- Permanent improvement to the total soil structure.
- Improved aeration and exchange of soil gasses.
- Consequent increased natural biological soil health.

Al Habtoor Polo Fields Dubai – Commenced June 2015,
completed and ready to play December 2015.
Stolonised Bermuda 419 – Grown to perfection with 10L/m² per day!

Immense Water Savings
